CLAIM LISTING:

Claims 1-36 (Canceled)

37. (Currently amended) A method of processing a digital image using a portable ~~electronic~~ digital image capturing device, the method comprising:

      detecting a user selection of a first function to communicate a first digital image over a wireless network to a first destination;

      determining a first end use process reference in response to the user selecting the first function, wherein the first end use process reference includes a predetermined end use output format of the first destination;

      detecting a selection of the first digital image at the portable digital image capturing device;

      determining an image format size of the first end use process reference to display the processed image using a predetermined image format size of the first destination;

      initiating a processing of the first digital image using the first end use process reference to form a first processed digital image at the portable digital image capturing device; and

      in response to identifying the user, initiating a first communication of the processed digital image over the wireless network communicatively coupled to the first destination using the first function[[,]] such that the first destination ~~operable to output~~ may display the processed digital image using the predetermined end use output format.

38. (Canceled)

39. (Currently amended) The method of claim 37 further comprising:

determining an image compression size of the <u>first</u> end use process reference; <u>and</u>

processing the first digital image using the image compression size to form the processed digital image in response to initiating the processing <u>of</u> the first digital image using the first end use process reference; and

~~wherein initiating the first communication includes communicating the processed digital image including the image compression size over the wireless network coupled to the destination~~.

40. (Canceled)

41. (Withdrawn) The method of claim 37 further comprising:

determining a subscriber unit functionality of the portable digital image capturing device using a subscriber system application;

enabling at least one digital image process function of the portable digital image capturing device in response to determining the subscriber unit functionality, the at least one digital image process function configured to access the end use process reference to initiate a processing of a captured digital image; and

enabling a non-digital image process function of the portable digital image capturing device in response to determining the subscriber unit functionality.

42. (Withdrawn) The method of claim 37 further comprising:

determining a profile of the portable digital image capturing device;

enabling access to at least one function using the profile; and

processing the first digital image in response to a user selecting the at least one function enabled using the profile.

43. (Withdrawn) The method of claim 37 further comprising:

detecting a first user profile of the portable digital image capturing device;

enabling the first function using the first user profile;

detecting a second user profile of the portable digital image capturing device; and

enabling a second function using the second user profile, the second function different than the first function.

44. (Currenly amended) The method of claim 37 further comprising:

determining a device identifier of the portable digital image capturing device; and

communicating the device identifier and the first processed digital image to the first destination, the device identifier operable to be used at the first destination to access to the first processed digital image.

45-46. (Canceled)

47. (Previously presented) The method of claim 37 further comprising:

determining an application identification reference of the first function;

determining a device identifier of the portable digital image capturing device; and

communicating the application identification reference and the device identifier with the processed digital image to the destination.

48. (Withdrawn) The method of claim 37 further comprising:

determining a subscription based service;

authenticating a user of the portable digital image capturing device;

accessing a website using the portable digital image capturing device in response to the authenticating the user;

receiving a selection of the first digital image to upload using the subscription based service; and

uploading the first digital image to the website.

49. (Currently amended) A portable ~~electronic~~ digital image capturing device operable to record a first digital image, comprising:

an image input sensor operable to record [[a]]the first digital image;

a memory operable to store the first digital image;

a processor coupled to the memory, the processor operable to:

detect a user selection of a first function to communicate the first digital image over a wireless network to a first destination operable to display digital images;

determine a first end use process reference in response to the user selecting the first function, wherein the first end use process reference includes a predetermined end use output format of the first destination;

detect a selection of the first digital image at the portable digital image capturing device;

determine an image format size of the first end use process reference to display the processed image using a predetermined image format size of the first destination;

initiate a processing of the first digital image using the first end use process reference to form a first processed digital image at the portable digital image capturing device; and

in response to identifying the user, initiate a first communication of the processed digital image over a wireless network communicatively coupled to the first destination using the first function[[,]] such that the first destination ~~operable to output~~ may display the processed digital image using the predetermined end use output format.

50. (Canceled)

51. (Withdrawn) The portable electronic device of claim 50 further comprising wherein:

a subscriber unit system software application operable to enable access to a second digital image processing application received by the wireless communication module; and

the wireless communication module operable to receive the second digital image
processing application via the wireless communication medium.

52. (Withdrawn) The portable electronic device of claim 51, further comprising:
   a first digital image processing function accessible using the first digital image processing
      application;
   a second digital image processing function accessible using the second digital image
      processing application; and
   the wireless communication module operable to communicate the first processed digital
      image over the wireless communication medium.

53. (Withdrawn) The portable electronic device of claim 51, further comprising a wireless
telephone.

54. (Withdrawn) The portable electronic device of claim 53, further comprising a Bluetooth
communication module.

55. (Currently amended) The portable ~~electronic~~ device of claim 49, wherein:
   the processor is further operable to receive a selection of an email address;
   the processor is further operable to formulate a mark-up language encoded file including
      a reference to the first digital image; and
   the first communication includes the email address and the mark-up language encoded
      file.

56. (Currently amended) The portable ~~electronic~~ device of claim 49, further comprising:

> a first image capture function button;
>
> an image magnification function operable to magnify a view of the first digital image;
>
> an email function operable to be accessed using a graphical user interface;
>
> an image upload function operable to be accessed using the graphical user interface; and
>
> a pointing device selector operable to:
>
> > enable selection of the first function;
> >
> > enable selection of the email function;
> >
> > enable selection of the upload function; and
> >
> > enable selection of the first digital image.

57. (New) The method of claim 37 wherein the portable digital image capturing device is a wireless telephone.

58. (New) The method of claim 57 wherein the wireless telephone communicates using Global System for Mobile communication.

59. (New) The method of claim 58 wherein the first digital image is a video image.

60. (New) The method of claim 37 wherein identifying the user is done by the portable digital image capturing device.

61. (New) The method of claim 37 wherein identifying the user is done by the first destination.

62. (New) The portable device of claim 49 wherein the portable digital image capturing device is a wireless telephone.

63. (New) The portable device of claim 62 wherein the wireless telephone communicates using Global System for Mobile Communication.

64. (New) The portable device of claim 63 wherein the first digital image is a video image.

65. (New) The portable device of claim 49 wherein identifying the user is done by the portable digital image capturing device.

66. (New) The portable device of claim 49 wherein identifying the user is done by the first destination.
